4400 Series Injector

4400 Series Injector

Parts List

Item #	Part #	Description
1	A-2600	Breather
2	A-4066	Oil Gauge Assembly
3	A-1653	½" x ⅝" Coupling
4	A-2264	¼ HP, 1ph, 60 Hz, 115/230 Volt, TEFC
	A-2268	¼ HP, 3ph, 60 Hz, 230/460 Volt, TEFC
	A-2265	¼ HP, 1ph, 60 Hz, 115/230 Volt, Ex. Proof
	A-2271	¼ HP, 3ph, 60 Hz, 230/460 Volt, Ex. Proof
5	B-0431	Base for Two 5 Gallon Tanks and Pump
	B-0436	Base for One 5 Gallon Tank and Pump
	B-0437	Base for Pump
6	A-1741	Spacer for 48 Frame Motor Only

Item #	Part #	Description
7	A-0164	Hex Nut
8	A-3303	¼" Steel Lockwasher
9	A-0167	Cut Washer
10	A-0163	Cap Screw
11	B-1167	Coupling Guard
12	See Page 9	Head Assembly
13	A-3116	Elbow
14	A-3117	Polypropylene Tube
15	A-3118	Connector
16	A-0664	5 Gallon 430 Stainless Steel Chemical Tank
17	F-0871	Tank Gauge Assembly for 5 Gallon Tank

Operating Instructions and Dimensions

Operating Instructions

Note: The motor needs to be wired to turn the shaft of the pump clockwise.

1. Check oil level in gear box regularly. Observe oil level indicator Item #21 Page 6.
2. Check for excess chemical leakage around the packing gland. If it is impossible to tighten, replace the packing. If the plunger is badly scored, replace the plunger and packing. If excessive packing failure is experienced, consult your Flomore representative.
3. Each Flomore Series 4400 Pump has an adjustment for the required stroke length. To adjust stroke length see the *Flow Rate Adjustment* instruction note on page 4.

Double Head Single Tank

- * 10 Gallon Tank
- * 5 Gallon Tank

Double Head Double Tank

Single Head

Gear Box Assembly

Side View

Flow Rate Adjustment

Turn knob, Item #14, clockwise to decrease flow, counterclockwise to increase flow. Each complete turn of the knob results in a 10% change in stroke setting. Each groove on the spindle, Item #15 Page 4, is equal to 25% change in stroke setting. To adjust pump while stopped, make sure plunger is in the full forward position.

Gear Box Assembly

Parts List

<i>Item #</i>	<i>Part #</i>	<i># Req.</i>	<i>Description</i>	<i>Material</i>
1	A-4256	2	Belleville Washer	302 Stainless Steel

Horsepower Requirements for Mult-Headed Units

Maintenance

Replacing the Stroke Adjustment Gears, Page 7

1. When replacing the steel stroke adjustment gears, they have to be correctly positioned relative to the crosshead, the stroke adjustment knob, and to each other. Rotate the motor coupling by hand until the crosshead, Item #11, is moved forward as far as it will go toward the side of the housing in which the head is mounted.
2. Assemble the small and large gears, Items #12 & 22, in place. Leave the set screw, Item #16, in the large gear, loose for the time being. The two gears should be in mesh at this point, and rotating the large gear by hand will cause the small gear to move forward and back on the adjustment bolt, Item #9.
3. Turn the large gear in the direction that causes the small gear to move forward toward the crosshead, and continue this turning motion until the small gear is flush up against the crosshead (no lost motion).
4. Now turn the stroke adjustment knob, Item #17, clockwise until it covers the last groove on the spindle, then tighten the set screw, Item #16, in the large steel gear, using a 5/64" Allen wrench.

The pump is now set in full discharge stroke position, and all parts are in their correct relative positions. To make further adjustment in the flow rate, see the Flow Rate Adjustment instructions on Page 4.

Disassembly of the Power Mechanism, Page 7

1. Disconnect and remove pump head from power unit.
2. Remove Item #22, large steel drive gear, by loosening Item #16, set screw, with a 5/64" Allen wrench.
3. Remove Item #15, rod retainers, and Item #14, o'rings, from each end of Item #4, bearing rods.
4. Using proper size punch, push bearing rods through Item #11, crosshead, and out opposite side of gear box.

Remove Worm Gear and Bearing from Gear Box, Page 5

1. Remove cap, Item #25, from bottom of pump.
2. Remove Item #22, hex-head machine screw and spring washer and Item #23, bottom thrust washer. You can now remove the worm gear, Item #27, and Item #21, bearing, through the top of the housing.
3. Upon replacing, be certain the gear roll pin, Item #26, is located in its proper place -- holding the bearing, Item #21, in proper alignment.

To Remove Crosshead Bearing from Worm Gear, Page 7

Remove Item #11, crosshead, and lift bearing off of Item #19, bearing stud.

To Remove the Worm Gear and Shaft, Shaft End Bearing, and/or Oil Stem, Page 7

It is not necessary to remove crosshead, guide rods, or worm gear in order to remove the drive shaft and its component parts.

1. Disconnect flexible coupling and remove motor from base. If unit is equipped with container on base, it is best to remove entire gear box from base:
 - a. Remove Item #27, truarc ring.
 - b. Remove Item #6, pipe plug.
2. Insert proper size punch into recess on small end of Item #8, shaft, (small end under Item #6, pipe plug). Carefully drive shaft out through opposite side of housing. Punch size should be small enough so not to drive against Item #5, inner race, (if it is desirable to remove Item #7, needle bearing, and Item #5, inner race, it should be done after the shaft has been removed).
3. As the shaft is being driven out, care should be taken to see that the large gear worm turns. This will "walk" or disengage the gear teeth.
4. As the shaft emerges from the side of housing, it will force out the oil seal, Item #25, seal cartridge, Item #29, and ball bearing, Item #23.
5. Withdraw the shaft from pump housing.
6. In order to remove ball bearing, Item #23, from shaft, it is necessary to remove one or both truarc rings, Item #24.
7. Upon replacing, care should be taken to "walk" the two worm gears back together.
8. Be sure the two truarc rings, Item #24, are in place: also seal and seal housing are in properly (the seal lips and seal expander spring should face into the pump). Make sure the o'ring, Item #28, is in its proper place.
9. The shaft assembly should be inserted into the pump until shaft bearing, Item #23, shoulders against the truarc ring, Item #24, located near the inner edge of the hole into which the shaft is inserted.

Apply Lubriplate 630 SS to wear surfaces of the following items, Page 5:

- Guide and crosshead bearing rod surfaces in contact with crosshead.
- Worm teeth and gear teeth.
- Seal cartridge (Item #29).
- Worm gear in contact with lower bearing (Item #21).
- Thrust washer (Item #23).
- Surface in contact with lower bearing (Item #21).
